

THALISSON PEREIRA

Senior Software Engineer | .NET Backend Engineer | ASP.NET Core | REST APIs | SQL Server

London, ON, Canada N6K 0E8 | thalisson_21@icloud.com | +1 519-670-8006 | [linkedin.com/in/thalissonpereira01](https://www.linkedin.com/in/thalissonpereira01) | <https://github.com/Thaalisson> | <https://devthalisson.netlify.app/>

PROFESSIONAL SUMMARY

Senior Software Engineer with 13+ years of experience designing and building scalable backend systems using C#, .NET, ASP.NET Core, and SQL Server.

Strong expertise in RESTful APIs, distributed systems, software architecture, and high-performance enterprise applications across telecom, finance, logistics, and SaaS environments.

Experienced in Clean Architecture, DDD, microservices, API-driven systems, and performance optimization for modern scalable applications.

Proven track record of delivering enterprise solutions, modernizing legacy systems, and improving scalability, maintainability, and backend performance in Agile cross-functional environments.

TECHNICAL SKILLS

Languages: C#, SQL, TypeScript, JavaScript

Backend: .NET, .NET Core, ASP.NET Core, Web API, RESTful APIs, Entity Framework Core, LINQ, ADO.NET

Architecture: Clean Architecture, DDD, SOLID, Microservices, API-driven systems, Distributed Systems

Frontend: React.js, React Native, Expo, TypeScript, Tailwind CSS

Databases: SQL Server, PostgreSQL, MySQL

Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions

Tools: Git, Swagger/OpenAPI, Postman, Agile (Scrum/Kanban)

Legacy Systems: VB6, ASP.NET Classic, System Modernization

Additional: Performance Optimization, SQL Tuning, Authentication/JWT, Unit Testing, Integration Testing

PROFESSIONAL EXPERIENCE

Software Developer – Opid Technologies | May 2022 – Present | Tillsonburg, ON, Canada

- Designed and developed scalable backend services and RESTful APIs using ASP.NET Core, C#, and SQL Server for enterprise workforce management applications.
- Built API-driven and JSON-based dynamic UI systems supporting React.js and React Native applications.
- Applied Clean Architecture, SOLID principles, and modular backend design to improve scalability and maintainability.
- Improved backend performance and API response times through query optimization, caching strategies, and architecture improvements.
- Developed scheduling and workforce management features handling complex business logic and real-time updates.
- Collaborated with frontend, product, and business teams in Agile environments to deliver scalable enterprise solutions.
- Reduced rework by 30% through improved software design and backend architecture standardization.

Senior Software Developer – MFMti | Oct 2013 – May 2022 | São Paulo - Brazil

- Developed backend systems using C#, ASP.NET MVC, and SQL Server for enterprise clients including Claro, Boticário, Jequití, and PAN Bank.
- Built RESTful APIs and service integrations, improving system integration and reducing response times by 20%.
- Designed and optimized complex SQL queries, stored procedures, and database structures, improving performance by 30%.
- Participated in system design, requirements analysis, and technical decision-making in collaboration with clients and cross-functional teams.
- Migrated legacy systems to .NET Core, improving scalability, cross-platform compatibility, and reducing downtime by 20%.
- Developed and maintained applications across multiple environments (Web, APIs, Windows Services), ensuring system reliability and data integrity.
- Worked in Agile environments (Scrum/Kanban), contributing to faster delivery cycles and improved team efficiency.

HIGHLIGHTED PROJECTS

- Enterprise Debt Recovery CRM Platform (Claro / América Móvil): Designed and developed a large-scale debt collection and customer negotiation platform for one of the largest telecom groups in Latin America. Delivered core backend systems, CNAB billing integrations, digital collection workflows, and enterprise reporting features within a 3-month timeline using C#, ASP.NET, SQL Server, and REST APIs. Improved debt recovery operations and customer self-service experience at enterprise scale.
- Billing Platform (Jequiti): Improved billing efficiency by 34% using ASP.NET MVC and REST APIs.
- Scheduling System (TFT Global): Improved workforce efficiency by 40% through backend services.
- No-Code Platform Builder (Opid Technologies): Developed a dynamic no-code platform enabling visual page creation using JSON-driven layouts and reusable UI components with React.js, React Native (Expo), TypeScript, and Tailwind CSS. Implemented real-time preview and versioned layout systems, reducing UI creation time by 50% and development rework by 35%.

EDUCATION

Technologist Degree in Systems Analysis and Development
São Judas University – São Paulo, Brazil (2019–2021)

LANGUAGES

English (Advanced) | Portuguese (Native)
